Estimated Premium cost before federal subsidy/cwt/month @ various deductibles(ded/$ cost) $0/$0.79, $0.50/$0.66, $1/$0.36, $1.50/$0.22

Federal Premium Subsidy: if at least 2 months milk is enrolled for the monthly enrollment period. (deductible/subsidy rate): $0/18%, $0.10/19%, $0.20/21%, $0.30/23%, $0.40/25%, $0.50/26%, $0.60/27%, $0.70/28%, $0.80/28%, $0.90/29%, $1.00/29%, $1.10/29%, $1.20/29%

Default feed amounts used to calculate com.: .014T .1/2 bu. soymeal .002T .4 lbs. to produce 1 cwt. of milk

The above estimated income is from the homepage of the University of Wisconsin Dairy Marketing and Risk Management Program and is maintained by Prof. Brian W. Gould of the Dept. of Agric. and Applied Economics. It is recommended that you use the browser: Internet Explorer (V7), Firefox, or Safari set at their medium or normal text size; http://future.asee.wisc.edu/dg/lgm/premium/

**Dairy GM Historical Performance Estimates:**
- Dairy GM Historical Performance Estimates: Up to $2.76 ($3.00 with new federal subsidy) of producer benefits paid for each dollar $1 premium cost (first 13 enrollment periods 8/08-8/09 (with coverage through 7/10)); $1.19 ($1.45 with new federal subsidy) of producer benefits for each dollar $1 premium cost; past 10 years (retro-actively applying Dairy GM insurance program to board of trade prices). Above results based on enrollment of fixed amount of milk each month of each enrollment period.
New LGM Dairy Gross Margin (income over feed cost) Insurance

The program is based on milk income over feed costs, which the program calls a “gross margin.” The insurance program covers the difference between the expected gross margin (insurance guarantee) and the actual gross margin for the producer’s selected months, based on a targeted amount of milk. Futures prices from the Chicago Mercantile Exchange (CME) are used to determine the values of Class III milk, corn and soybean meal. Futures prices result in uniform commodity prices for all producers. There is a maximum producer enrollment limit of 240,000 cwts of milk per year.

Key Definitions:
The expected gross margin is calculated by using the amount of milk (cwt) the producer chooses to enroll times the futures prices for the milk and feed to be fed for the selected month(s). The expected gross margin is the difference between the values of milk minus the feed cost.

The actual gross margin is calculated for the same time period as the expected gross margin. The calculations are done using the same methodology as was used to calculate the expected gross margin.

An insurance indemnity (loss payment) results when the expected gross margin exceeds the actual gross margin.

Deductibles are available from $0 to $2 per cwt, in $0.10 intervals. Indemnities are paid within 60 days after the last month insured (after the claim can be calculated), in the chart below, payments could have occurred December through July if any of these months had been selected as the months for which insurance protection was purchased.

Cause of loss covered is the difference between the expected gross margin (insurance guarantee) and the actual gross margin. It does not insure against death or other cause of production loss or damage to the producer’s dairy cattle. It does not insure expected price changes which are already reflected in BOT futures prices.

Enrollment Periods. Twelve monthly enrollment periods are available beginning the last business Friday of each month until 9pm next day. The last 10 months of each enrollment period is when insurance is available. Producer can elect to insure during selected or all 10 months in each period. Program is available in 48 contiguous states.

Premium is billed at the end of the coverage period. There federal premium subsidy if milk is enrolled in at least 2 of the months available for the monthly enrollment period: (deductible/subsidy rate): $0/18%, $0.10/19%, $0.20/21%, $0.30/23%, $0.40/25%, $0.50/28%, $0.60/31%, $0.7/34%, $0.8/38%, $0.9/43%, $1.0/48%, $1.10 to $2.00/50%.

August 2008 enrollment performance
